

PRODUCT REQUIREMENTS DOCUMENT

Vitafit

Retention & Engagement Initiative

Product Area	Engagement & Retention
Status	Draft — v1.0
PM Owner	Product Manager, Vitafit
Date	April 2026
Audience	Product, Design, Engineering, Growth

Context

Vitafit connects users to live and on-demand fitness sessions across Zumba, Yoga, HIIT, Pilates, and more. Despite strong top-of-funnel acquisition, the platform is experiencing a meaningful drop in D30 retention and session repeat rates. Exit surveys and in-app data point to two root causes: declining personal motivation and weak social accountability. This PRD defines two focused product bets — a Gamification & Streaks Engine and a Community Challenge Hub — designed to directly counter these drop-off drivers.

Features at a Glance

#	Feature	One-liner	Primary Goal
F-01	Gamification & Streaks Engine	Motivate daily habits through streaks, badges, and XP rewards	↑ Repeat usage & session completion
F-02	Community Challenge Hub	Group challenges with instructor-led leaderboards and social accountability	↑ Community, instructor connection & D30 retention

F-01 · Gamification & Streaks Engine

Motivate daily fitness habits through streaks, XP, badges, and personalised milestones

Project Title	Vitafit Streaks & Rewards — Gamification Engine
Description	A persistent motivation layer that tracks every completed session and rewards users with Experience Points (XP), streak counters, achievement badges, and level-up milestones. Progress is visible on a personalised Dashboard and celebrated through in-app moments and push notifications.
Problem	Users who complete their first 3 sessions drop off sharply before day 14. There is no intrinsic hook that rewards consistency — each session feels standalone with no cumulative payoff. Without visible progress, motivation decays.
Why (Evidence)	- Exit survey (n=1,200): 58% users 'lost motivation' as #1 drop-off reason - Session analytics: 64% of churned users had ≤3 sessions in their first 2 weeks - Benchmark: platforms with streak mechanics (Duolingo, Nike Run Club) report 2–3× higher D30 retention - Internal A/B (progress bar only): +11% session completion — confirms gamification signal
Success Metrics	+25% - D14 Retention +30% - Weekly Active Users ≥60% - Streak Day-2 Continuation +20% - Avg. Sessions / User / Week <i>Guard-rail: session skip rate must not increase >5% (users gaming streaks without working out).</i>
Audience	- Primary — Registered users, <4 weeks tenure, at risk of churn - Secondary — Power users seeking status and leaderboard prestige - Out of scope — Corporate / B2B accounts
What (Features)	Streak Counter - Daily streak tracked per calendar day; one completed session = streak maintained - Streak freeze available (1 per week) to protect streaks during rest days - Streak milestones: 7 / 14 / 30 / 60 / 100 days trigger badge + confetti moment XP & Level System - XP awarded per session: base XP (10) + bonus for duration, difficulty, and consistency 10 levels: Spark → Flame → Ember → Blaze → Inferno → ... → Vitafit Legend - Level badge displayed on user profile and visible in community features Achievement Badges 30+ badges: class-type badges (Yoga Devotee), instructor badges (Fan Favourite), challenge badges - Rare 'Platinum' badges for top 5% of users — time-limited, drives FOMO Progress Dashboard - Homescreen widget: streak flame, weekly XP bar, next badge progress ring - Monthly recap card (shareable): sessions, calories, top class type, new badges

How (Experimentation)	Phase 1 — Controlled A/B Test (Weeks 1–6) • 50/50 split: Control (no gamification) vs Variant (full streak + XP) • Segment: users in D0–D14 cohort; n=10,000 per arm • Primary metric: D14 retention; • Secondary: sessions/week, push notification CTR Phase 2 — Rollout (Weeks 7–10) • Full rollout to new users if D14 retention lifts ≥15% with p<0.05 • Gradual rollout to existing users (10% → 50% → 100%) over 3 weeks Phase 3 — Iteration (Week 11+) • Test alternative XP multiplier schemes, streak freeze limits, badge rarity thresholds																		
	When (Timeline)	<table><tr><th>Phase</th><th>Duration</th><th>Milestone</th></tr><tr><td>Discovery & Design</td><td>Wk 1–3</td><td>Specs + prototypes signed off</td></tr><tr><td>Engineering Build</td><td>Wk 4–8</td><td>Feature complete in staging</td></tr><tr><td>A/B Test</td><td>Wk 9–14</td><td>Results read-out</td></tr><tr><td>Full Rollout</td><td>Wk 15–17</td><td>100% users on gamification</td></tr></table>			Phase	Duration	Milestone	Discovery & Design	Wk 1–3	Specs + prototypes signed off	Engineering Build	Wk 4–8	Feature complete in staging	A/B Test	Wk 9–14	Results read-out	Full Rollout	Wk 15–17	100% users on gamification
		Phase	Duration	Milestone															
Discovery & Design		Wk 1–3	Specs + prototypes signed off																
Engineering Build		Wk 4–8	Feature complete in staging																
A/B Test		Wk 9–14	Results read-out																
Full Rollout	Wk 15–17	100% users on gamification																	

F-02 · Community Challenge Hub	
Group fitness challenges with instructor-led leaderboards and social accountability threads	
Project Title	Vitafit Community Challenge Hub — Social Fitness, Together
Description	A structured challenge engine where instructors create themed fitness challenges (e.g. '21-Day Yoga Reset', '30-Day Zumba Blast'). Users join, log progress, earn community badges, and compete or collaborate on leaderboards — all within a dedicated social feed per challenge.
Problem	Users feel no personal bond with instructors and no accountability to a peer group. Fitness is inherently social — yet Vitafit's current experience is entirely solo. Without a community layer, there is no social cost to skipping a session and no shared identity to drive loyalty.
Why (Evidence)	- NPS deep-dive: 'I don't feel connected to anyone on this app' — top verbatim complaint (31% mention) - Competitor analysis: Peloton's group rides and ClassPass challenges drive 2.4× higher LTV - In-app survey: 73% of users say they'd exercise more if friends were also on the platform - Instructor churn signal: top instructors cite 'low interaction with students' as a key demotivator
Success Metrics	+35% - D30 Retention (challenge participants) ≥40% - Challenge Completion Rate +50% - Instructor Profile Follows 3× - Sessions/Week vs Non-Participants <i>Guard-rail: community feed moderation queue must stay <24 hr response time.</i>
Audience	- Primary — Active users (≥1 session/week) seeking motivation and social connection - Secondary — Instructors wanting deeper engagement with their student base - Tertiary — Dormant users (re-engagement via challenge invite notifications)

What (Features)	1. Challenge Creation (Instructor-side) – Instructors define: challenge name, duration, class type, weekly session target, banner image – Option: Competitive (leaderboard) or Collaborative (team XP goal) – Auto-generated shareable link + in-app challenge card 2. Challenge Feed & Community Wall – Dedicated feed per challenge: progress posts, photo check-ins, reactions, comments – Instructor 'Coach Notes' pinned daily — creates parasocial bond – AI-generated weekly summary nudge: 'You're in the top 20%! Keep it up.' 3. Leaderboard & Team Mode – Individual leaderboard: ranked by sessions completed and XP earned – Team mode: users can form squads of 4–6; team aggregate score on leaderboard – Weekly 'Most Improved' spotlight — rewards growth, not just performance 4. Challenge Badges & Completion Rewards – Exclusive challenge badge on profile + certificate shareable to social media – Top 3 finishers receive 'Champion' badge and 1-month subscription discount – All completers unlock early access to the next instructor-led challenge															
	How (Experimentation) Phase 1 — Pilot with 5 Top Instructors (Weeks 1–4) • Hand-pick 5 high-follower instructors; each runs one 21-day challenge • Measure: join rate, DAU within challenge cohort, completion rate, instructor NPS Phase 2 — Controlled Experiment (Weeks 5–10) • 50/50 split: challenge-invited users vs control (no challenge access) • Primary metric: D30 retention; • Secondary: sessions/week, community posts per user Phase 3 — Open Platform (Week 11+) • Unlock challenge creation for all instructors with quality gate (min 200 followers) • Introduce brand-sponsored challenges (monetisation pathway)															
	When (Timeline) <table><tr><th>Phase</th><th>Duration</th><th>Milestone</th></tr><tr><td>Instructor Pilot</td><td>Wk 1–4</td><td>5 live pilot challenges</td></tr><tr><td>Build & Integrate</td><td>Wk 5–9</td><td>Feed, leaderboard, badges live</td></tr><tr><td>A/B Experiment</td><td>Wk 10–15</td><td>Stat-sig retention result</td></tr><tr><td>Open Platform</td><td>Wk 16–20</td><td>All instructors can create</td></tr></table>	Phase	Duration	Milestone	Instructor Pilot	Wk 1–4	5 live pilot challenges	Build & Integrate	Wk 5–9	Feed, leaderboard, badges live	A/B Experiment	Wk 10–15	Stat-sig retention result	Open Platform	Wk 16–20	All instructors can create
	Phase	Duration	Milestone													
Instructor Pilot	Wk 1–4	5 live pilot challenges														
Build & Integrate	Wk 5–9	Feed, leaderboard, badges live														
A/B Experiment	Wk 10–15	Stat-sig retention result														
Open Platform	Wk 16–20	All instructors can create														

Page 3 · Feature Flow Diagrams

Visual user & system flows for F-01 Gamification Engine and F-02 Community Challenge Hub

F-01 · Gamification & Streaks Engine — User Flow

Streak Break Path

User misses a day → streak resets to 0 → 'Streak Freeze' prompt shown (1 available/week) → if freeze applied, streak preserved → if declined, streak resets with re-engagement nudge next morning

XP & Level-Up Path

Session XP accumulated → threshold crossed → Level-Up animation → new level badge applied to profile → updated in community leaderboard (if in active challenge)

F-02 · Community Challenge Hub — Dual Flow

Two parallel flows: Instructor (Challenge Creation) and User (Challenge Participation)
